Research CROP: Determinant Calibration 1 - Netherlands
Review Medical Research Involving Human Subjects Act (WMO)
Ethical assessment

our reference: U2018/09858/HVM

Dear dr. Peters,

Herewith we would like to inform you that the Ethical research board (cETO) of the Open University of the Netherlands has assessed your proposed study entitled: CROP: Determinant Calibration 1 – Netherlands on WMO review and on ethical aspects.

The cETO concludes that **there is no WMO obligation for this research**. The research focuses solely on the explanation of everyday health behavior.

On ethical aspects the cETO has ask several questions on December 4e, which the researcher has answered on December 6e. The cETO however does have some additional remark. please ensure that these conditions are met:

- The researcher must make it sufficiently clear that the participant of the course may choose one of the offered studies (via virtual lab). Since some form of voluntariness must be guaranteed.
- Please add own contact-details (in any case state your own names)
- The researcher must ensure that there is no collection of personal data within the study, more in specific within the workflow of the virtual lab.

The researcher is not obliged to secure the research data on the T-drive, as the researcher chose to store the data via Open Access. This ensures that de OU can have access to the research data.

The cETO **concludes** – take into account the remarks above - **that your study is in line with the ethical codes for research in Human Subjects**.

The cETO wishes you success with conducting this research.

With kind regards,

Dr. M.H. Quint-Fens
Acting chair cETO
